DESCRIPTION

AI-focused Engineer with 10 months of hands-on experience in designing, developing, and deploying intelligent systems across automation, computer vision, and generative AI domains. Proven expertise in building scalable backend architectures using FastAPI and Node.js, and integrating LLM-based solutions such as RAG pipelines, face recognition systems, and Stable Diffusion workflows. Experienced in deploying production-grade AI services on cloud platforms.

EDUCATION

Rajkiya Engineering College

Bachelor of Technology in Computer Science

Sonbhadra, Uttar Pradesh

Nov 2021 – June 2025

EXPERIENCE

Studio11 Productions

AI Automation Engineer

Bangalore

Nov 2025 – Present

- Developed an AI-based documentation system that extracts text using Landing AI and authenticates customers.
- Developed AI pipelines for automation.

Verbros Technologies Pvt. Ltd.

Backend AI Engineer

Lucknow

June 2025 – Aug 2025

- Designed and deployed scalable backend architectures for AI-driven applications, developing a Retrieval-Augmented Generation (RAG) model.
- Integrated deep learning models (HuggingFace, Inswapper, Whisper, YOLOv5) with backend services using FastAPI and Node.js; deployed on AWS Lambda.

Junior Software Developer

Mar 2025 – June 2025

- Implemented an attention mechanism to monitor activeness through eye gazing and emotional expressions.
- Built a software solution using React.js, Node.js, and DeepFace to detect mood and play music accordingly.

Studio11 Productions

AI Intern

Remote

July 2024 – Sept 2024

- Developed and deployed image generation solutions using Stable Diffusion for personalized client images.
- Created custom nodes for face and iris detection, improving image processing accuracy.
- Annotated large datasets to enhance model performance and client-specific modification accuracy.

PROJECTS

RAG Model [\[GitHub\]](#) | *Python, Gemini, HuggingFace*

- Built a Streamlit-based multi-document RAG chatbot supporting PDF, DOCX, and TXT formats. Implemented document parsing, sentence-level chunking, transformer-based embeddings, and FAISS similarity search.
- Integrated a CrossEncoder reranker for relevance scoring and an LLM for accurate, context-aware responses with session-aware caching and dynamic chat interface.

Face Recognition-based Attendance System [\[GitHub\]](#) | *FastAPI, DeepFace, MongoDB*

- Developed a real-time face recognition attendance system using FastAPI, DeepFace, and Supabase
- Enabled multi-person recognition with daily attendance logging and an interactive Jinja2 dashboard for monitoring records.
- After dockerised the project in image is deployed on render. [\[Working Link\]](#)

Astromagic [\[GitHub\]](#) | *Generative AI, Flask, BERT, Python*

- Developed an AI-powered astrology app offering personalized insights using birth chart analysis and LLM-based recommendations. Integrated voice recognition and deployed on Render. [\[Working Link\]](#)

ACHIEVEMENTS

Google Developer Student Club AI/ML Lead (2023): Mentored peers and conducted workshops to explore AI/ML technologies.

SIH 2024 Finalist: Developed an AI system to predict and reduce dropout risk among primary school students. [\[Working Link\]](#)

Training and Placement Cell Representative: Facilitated communication with companies, coordinated placement drives, and guided peers on interview preparation.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, JavaScript, HTML/CSS

Frameworks: React.js, Node.js, Flask, FastAPI

Developer Tools: Hostinger, AWS (Lambda, EC2), Docker, Supabase, ComfyUI, AUTOMATIC1111, Roboflow

Libraries: TensorFlow, Keras, PyTorch, Scikit-learn, Gemini, spaCy, Word2Vec, NLTK, pandas, NumPy, Matplotlib
